

A liquid plant food with brown sugar, seaweed extract, and fulvic acid

BROWN SUGAR:

A carbohydrate that feeds to deeper roots and provides beneficial microbes for stronger roots and healthier plants. Gives the microbes a food source.

HUMATE WITH FULVIC ACID:

6% to 7% Humic Acid/with 10% Fulvic Acid. Benefits include an improved efficiency of nutrient uptake and reduces soil compaction. Creates a sponge-like effect in the soil to keep the nutrients in a plant-available form instead of getting tied up. Builds organic matter.

SEAWEED EXTRACT:

Promotes vigorous plant growth, healthy root systems, and maximum yield potential. Test as needed.

Note weather conditions when applying Ignyte. Applications should be made in early morning and late evening hours outside the heat of the day when feasible. Ignyte can be applied to most row crops and vegetable crops. Use of this product is recommended only as a supplement to a regular fertilization program and only on plants with confirmed secondary nutrient or micronutrient deficiencies. Always perform a small scale compatibility test before tank mixing.

APPLICATION RATE

- Foliar** Apply 16 to 48 fluid ounces per acre, pre-mix with 8 to 20 gal of water.
- In furrow** Apply 12.8 to 24 fluid ounces per acre, pre-mix with 3 to 10 gal of water.

APPLICATION TIMING

- At planting, use as a popup starter or mix with starter fertilizer.
- Apply at V4-V6 or just prior at early bloom (R1-R2) corn, soybeans, and dry beans.
- Spray on alfalfa 8-10 days after cutting, when plant starts to bush.
- Can be applied to seed, seed pieces, bulbs, tubers, and cuttings.
