

Ignyte CS

Carbon Solutions

A Soybean field performance trial was conducted by Lexvold Farms located in Goodhue Minnesota. The trial compared Ignyte w/fungicide against a fungicide plot. Grain moisture was 13.7% and test weight was approximately 57 pounds. Ignyte w/fungicide surpassed the fungicide plot by 5.27 bushels per acre. The results are listed below and were statistically significant in demonstrating the design of the product to increase the overall quality of the plant therefore increasing the plant's yield potential.
